# Paladugu Ganesh Naidu

AI Systems & Full-Stack Engineer @ ClinchWorks | GenAI, RAG &  
Applied ML | Security-Minded Builder | Red Hat Student Ambassador  
Bengaluru, Karnataka, India

## Summary

I'm an AI systems and full-stack engineer focused on taking ideas from prototype to deployed product. I build across generative AI, applied machine learning, APIs and web applications, with security and reliability built into the process. At ClinchWorks, I work on AI-enabled products and full-stack systems across frontend, backend, APIs, databases, AI integrations and cloud deployment. Selected work: • GNCORE — a Markdown-driven AI workflow framework published on PyPI. • Hybrid RAG API — a retrieval pipeline built with FastAPI and Ollama. • Applied machine learning — projects in cloud-cost forecasting, loan-approval prediction and resume shortlisting. • Security tooling — NmapAnalyzer and ReconX automation, plus responsible disclosure of a web vulnerability. • 3D ULPIN and cadastre mapping — a team project exploring AI, GIS, LiDAR and 3D reconstruction. I'm a computer science undergraduate at Nagarjuna College of Engineering and Technology and a Red Hat Student Ambassador. I previously served as a Google Student Ambassador in 2026. I'm GitHub Copilot Certified and hold the Hackviser CORE cybersecurity foundations certification. I'm interested in AI/GenAI engineering, full-stack product development and applied security—especially work where I can build, test, secure and ship useful software.

## Experience

### ClinchWorks

AI Systems & Full Stack Engineer

April 2026 - Present (6 months)

Bengaluru

Building and deploying AI-native, full-stack products at ClinchWorks using AI-assisted development, Generative AI, security, and production engineering. I use AI as a force multiplier across the development lifecycle — from idea and architecture to implementation, debugging, testing, security, and deployment — while taking ownership of the final system.

- Built and deployed products including ClinchWorks, VoiceOMagic, Samarthamamana Infra, and my developer platform.
- Developed full-stack systems across frontend, backend, APIs, databases, authentication, AI integrations, and cloud/VPS deployment.
- Integrated AI assistants, GenAI workflows, automation, and LLM-powered features into real applications.
- Apply a build → test → break → debug → secure → deploy → improve workflow, with a strong focus on production reliability and application security.
- Use my web security and exploitation background to think from both the builder and attacker perspective.

Currently exploring deeper AI systems, LLMs, agents, and AGI-oriented engineering and research.

## ToriiMinds

### Trainee

August 2025 - Present (1 year 2 months)

Karnataka, India

Trainee @ToriiMinds

## Google

### Google Student Ambassador

May 2026 - July 2026 (3 months)

Bengaluru

Google Student Ambassador promoting Google technologies and leading student tech communities on campus.

Organized events, workshops, and peer learning activities to increase engagement and innovation .

---

## Education

### Nagarjuna College Of Engineering and Technology

B-tech, Computer Science · (September 2024 - 2028)
